

Dataset 1: Handmade Arts & Crafts Studio 🎨

Scenario: A small business scaling up custom handmade gifts is losing money on emergency supply runs.

- 💬 **WhatsApp Export:** [10:15 AM] Riya: The bulk order of 100 resin keychains is due tomorrow. [10:30 AM] Sneha: We are out of the UV epoxy resin! I thought we had two bottles left. [10:35 AM] Riya: I'll run to the local craft store in Kolkata and buy it, but it's going to cost us 3x the wholesale price. [04:00 PM] Sneha: The local resin takes longer to cure. We might miss the shipping deadline.
- 🗣️ **Voice Note Transcript:** *"Listen, we need a better way to track our craft supplies. Every time we get a bulk order for handmade keychains or custom jewelry, we run out of materials halfway through and have to buy them at retail markup. It completely kills our profit margin on the art."*
- 📄 **Invoice Data (OCR):** INVOICE #102 Vendor: City Center Craft Supplies (Retail) Item: 1L UV Epoxy Resin (Emergency Purchase) Amount: ₹4,500 (300% markup over wholesale) Notes: Rush purchase for pending keychain order.

Dataset 2: Tech Event & Bootcamp Organizers 💻

Scenario: A college coding bootcamp keeps overspending on cloud hosting because they forget to shut down servers after class.

- 💬 **WhatsApp Export:** [09:00 AM] Event Lead: Everyone get ready, DKC is presenting his Python masterclass in 15 minutes. [09:05 AM] Tech Support: The main server is crashing because too many students are hitting the database. [09:10 AM] Event Lead: Just spin up a premium AWS server on the company credit card right now so the Python session doesn't lag. [05:00 PM] Tech Support: Event is over. I'm going home.
- 🗣️ **Voice Note Transcript:** *"Guys, we have to remember to spin down the cloud servers after the coding bootcamps end. We left the premium instances running all weekend after the Friday masterclass, and we burned through our entire monthly hosting budget in three days."*
- 📄 **Invoice Data (OCR):** INVOICE #AWS-993 Service: On-Demand Cloud Compute (Premium Tier) Duration: 72 Hours (Over the weekend) Amount: ₹18,200 Status: Auto-Deducted from Corporate Card

Dataset 3: Web3 / Blockchain Startup 🧑‍💻

Scenario: A crypto startup is losing development funds due to failing to use test networks before deploying.

-  **WhatsApp Export:** [11:00 AM] Dev_1: The smart contract for the Digital Asset Inheritance DApp is written. [11:15 AM] Dev_2: Awesome, push it directly to the Stellar mainnet so we can test the UI. [11:30 AM] Dev_1: It failed. There was a bug in the transaction logic. We just lost the deployment fee. [11:35 AM] Dev_2: Fix the code and push it to mainnet again.
-  **Voice Note Transcript:** *"We are bleeding wallet funds because the dev team is testing code directly on the main network. Stop skipping the testnet phase! Every time a transaction fails because of a typo, we are paying real gas fees for nothing."*
-  **Invoice Data (OCR):** INVOICE/LEDGER EXPORT Network: Stellar Mainnet Transaction Type: Smart Contract Deployment (Failed) Fee Incurred: 150 XLM Error Log: 'Invalid execution parameters'

Dataset 4: Local Restaurant & Catering

Scenario: A catering company is facing heavy penalties and unhappy customers because they keep forgetting essential equipment.

-  **WhatsApp Export:** [06:00 PM] Manager: Is the food truck loaded for the corporate dinner tonight? [06:15 PM] Driver: Yes, just arrived at the venue. [07:00 PM] Driver: Wait, nobody packed the chafing dish fuel or the serving spoons! [07:05 PM] Manager: Rent them directly from the hotel venue, whatever the cost. We can't serve cold food.
-  **Voice Note Transcript:** *"This is the third time this month we had to rent serving equipment from the venue because we forgot to load it into the truck. We need a mandatory physical checklist signed off by the driver before the truck leaves the kitchen."*
-  **Invoice Data (OCR):** INVOICE #9981 Vendor: Grand Hotel Venue Services Item: Emergency Catering Equipment Rental (Spoons, Fuel, Warmers) Amount: ₹8,000 Notes: Billed to catering vendor for missing supplies.

Dataset 5: E-Commerce Delivery Logistics

Scenario: A delivery service is paying massive refund claims because items aren't packed properly for rough transit routes.

-  **WhatsApp Export:** [02:00 PM] Driver 4: Route 7 is fully blocked due to construction. I have to take the dirt bypass road. [03:30 PM] Driver 4: Delivered the glassware package. The box was rattling a lot. [04:00 PM] Support: Customer just called furious. The glasses are completely shattered. [04:05 PM] Warehouse: We only used single-layer bubble wrap to save packing time.

- 🗣️ **Voice Note Transcript:** *"We are trying to save seconds in the warehouse by skipping the double-bubble wrap on fragile items. But because our drivers are taking alternate, bumpy routes to beat traffic, the items are breaking, and we are paying full refunds. It's false economy."*
- 📄 **Invoice Data (OCR):** INVOICE / REFUND RECEIPT Customer: S. Banerjee Item: Premium Glassware Set Status: Refunded in Full Amount: -₹6,500 Reason: Item destroyed in transit (insufficient packaging).
